

CUSTOMER FEEDBACK INTELLIGENCE

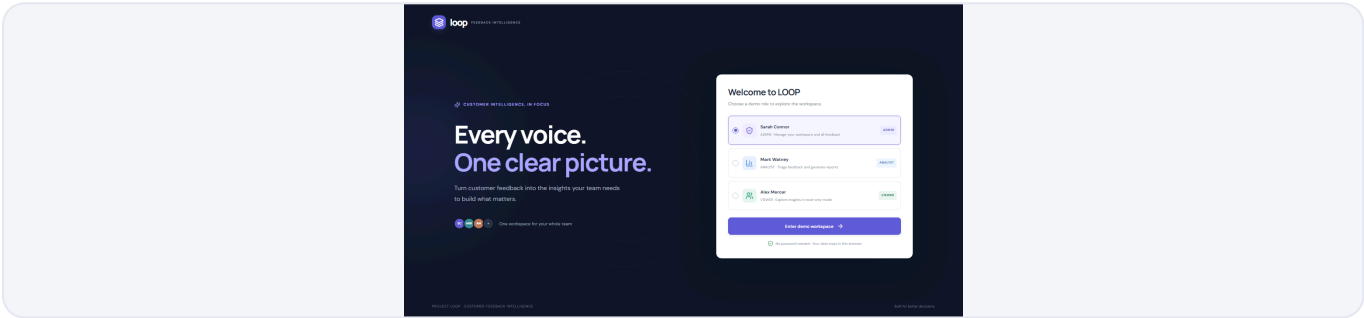

Project LOOP

From customer signal to product priority.

SUBMISSION-READY MVP

A responsive customer-feedback workspace for understanding sentiment, exploring evidence, and deciding what to improve next.

- Open the live demo

- Download the walkthrough video

Welcome screen · Choose a local demo persona; no sign-in required.

What the MVP demonstrates

Turn feedback into insight

- Dashboard KPIs, sentiment, trends, and themes
- Searchable inbox with filters, triage, and item detail
- CSV import and manual entry saved in browser storage
- Ask LOOP answers with citations from demo feedback

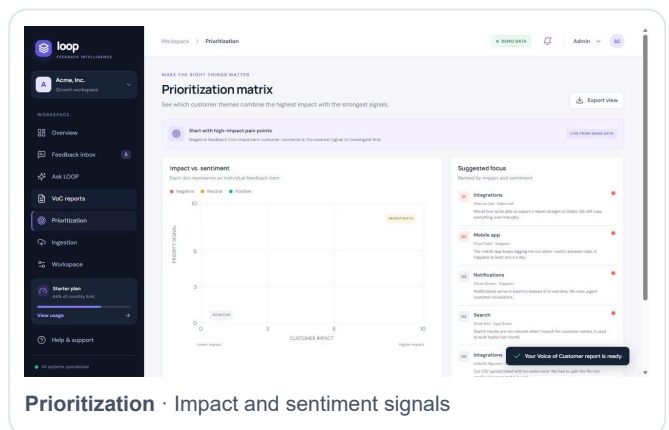

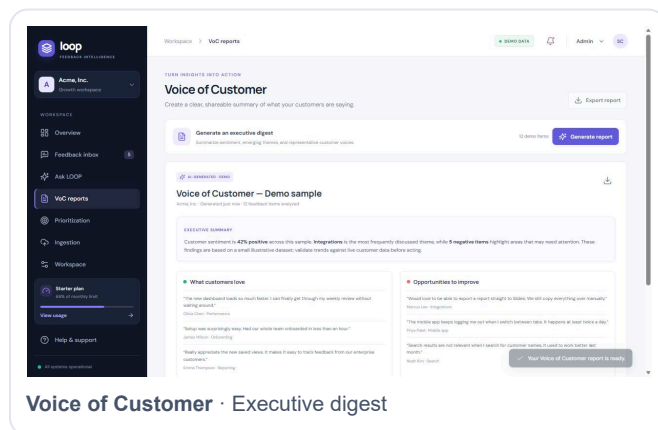

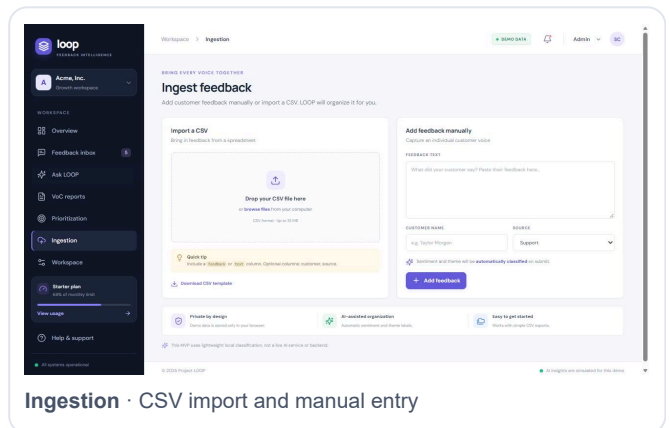

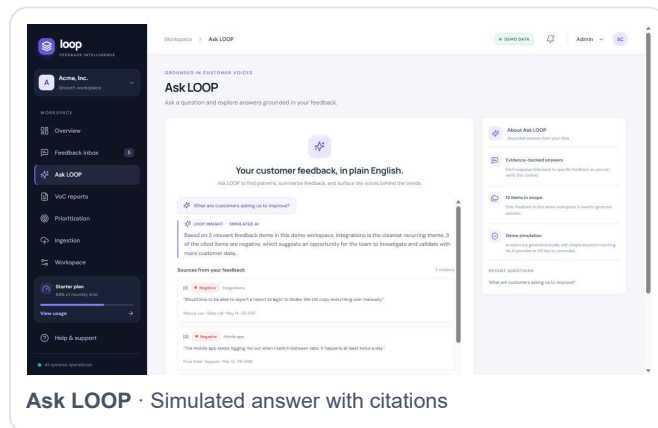

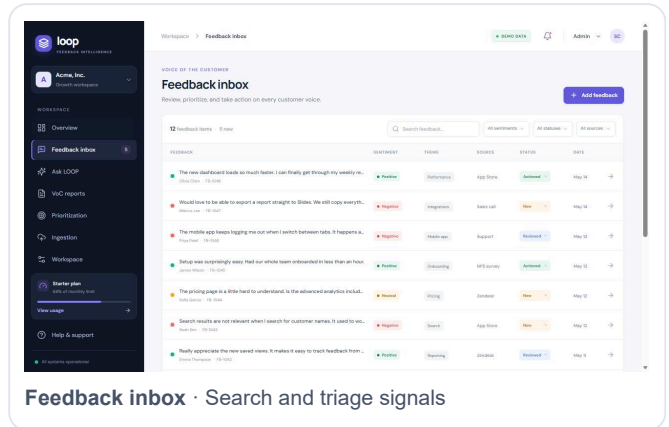

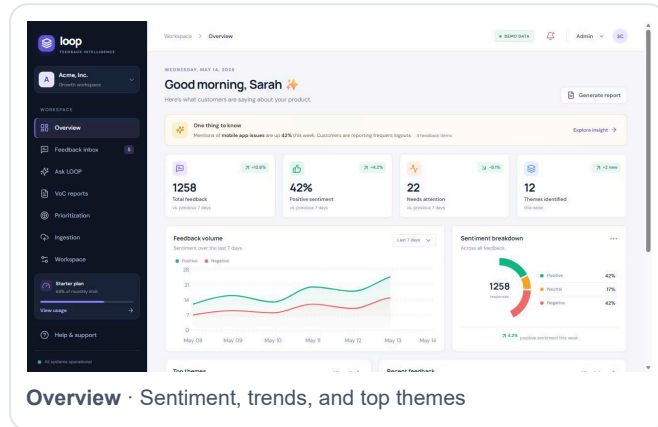

Make insights actionable

- Voice-of-Customer digest and text export
- Customer-impact and sentiment prioritization matrix
- Role-based demo personas: Admin, Analyst, Viewer
- Responsive layout for desktop and mobile

Demo transparency: The app uses sample data and browser-local storage. Classification, Q&A, and reports are simulated locally; no live AI, authentication service, or backend is connected.

Customer voices, in context

The audio-enabled walkthrough includes an original, softly mixed electronic music bed and subtle transition/interface accents.

Screenshots are captured from the running demo using illustrative sample feedback.

Deployed and ready to explore

The production frontend is hosted on Vercel and connected to the public GitHub repository. The project-domain URL was checked without signing in and returned HTTP 200.

Source repository	https://github.com/mmeenakshibio2016-byte/Project-LOOP
Video	Download the 28-second MP4 walkthrough with original soundtrack and sound effects
Stack	React 18, TypeScript, Vite, Tailwind CSS, Lucide React, Recharts

Verification performed

npm run build passed

npm run lint passed

public demo HTTP 200

demo flows smoke-tested

The walkthrough demonstrates role selection, dashboard, inbox and detail, cited Q&A, manual ingestion, report generation, prioritization, and viewer mode. The local sample state was restored afterward.

Scope and limitations

- Role permissions are client-side UX only and are not secure authorization.
- Sentiment and theme labels use lightweight local keyword heuristics; Ask LOOP uses local keyword matching rather than a live language model.
- Dashboard metrics and prioritization scores are illustrative, not live analytics.
- User-added feedback stays in that browser's local storage and is not shared.
- CSV import targets small, ordinary exports; there are no production connectors or data services.

Submission link: The live demo and GitHub-hosted report, video, and screenshots are publicly accessible. The demo's project-domain URL is the public entry point; some Vercel-generated deployment URLs may be access-protected.
